

# **EMC TEST REPORT**

**Applicant** Positioning Universal Inc

FCC ID 2AHRH-FJ1100L

**Product** GPS Tracker

Model FJ1100L

Report No. RXA1711-0386EMC01R1

Issue Date January 5, 2018

TA Technology (Shanghai) Co., Ltd. tested the above equipment in accordance with the requirements in FCC Code CFR47 Part15B (2017)/ ANSI C63.4 (2014). The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

Performed by: Wei Liu/ Manager

Wei Liu

## 1 Test Laboratory

## 1.1 Notes of the Test Report

This report shall not be reproduced in full or partial, without the written approval of **TA technology** (**shanghai**) **co.**, **Ltd.** The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein .Measurement Uncertainties were not taken into account and are published for informational purposes only. This report is written to support regulatory compliance of the applicable standards stated above. This report must not be used by the client to claim product certification, approval, or endorsement any government agencies.

## 1.2 Test facility

#### CNAS (accreditation number: L2264)

TA Technology (Shanghai) Co., Ltd. has obtained the accreditation of China National Accreditation Service for Conformity Assessment (CNAS).

### FCC (Designation number: CN1179, Test Firm Registration Number: 446626)

TA Technology (Shanghai) Co., Ltd. has been listed on the US Federal Communications Commission list of test facilities recognized to perform electromagnetic emissions measurements.

#### IC (recognition number is 8510A)

TA Technology (Shanghai) Co., Ltd. has been listed by industry Canada to perform electromagnetic emission measurement.

### VCCI (recognition number is C-4595, T-2154, R-4113, G-10766)

TA Technology (Shanghai) Co., Ltd. has been listed by industry Japan to perform electromagnetic emission measurement.

#### A2LA (Certificate Number: 3857.01)

TA Technology (Shanghai) Co., Ltd. has been listed by American Association for Laboratory Accreditation to perform electromagnetic emission measurement.

FCC EMC Test Report No: RXA1711-0386EMC01R1

## 1.3 Testing Location

Company: TA Technology (Shanghai) Co., Ltd.

Address: No.145, Jintang Rd, Tangzhen Industry Park, Pudong Shanghai, China

City: Shanghai

Post code: 201201

Country: P. R. China

Contact: Xu Kai

| Manufacturer         | Positioning Universal Inc                            |  |  |  |
| Manufacturer address | 4660 La Jolla Village Dr, San Diego, California, USA |  |  |  |

## 2.2 General information

| EUT Description          |  |  |  |  |  |
|--------------------------|--|--|--|--|--|
| Device Type:             | Portable Device                                |  |  |  |  |
| Product Name:            | GPS Tracker                                    |  |  |  |  |
| Model Number:            | FJ1100L  |  |  |  |  |
| SN:                      | Q1LL71G00001A                                  |  |  |  |  |
| HW Version:              | V1.0   |  |  |  |  |
| SW Version:              | ATL1_AT_4.0.2.7                                |  |  |  |  |
| Antenna Type:            | Internal Antenna                               |  |  |  |  |
| Test Mode:               | Transfer Data Mode                             |  |  |  |  |
| Auxiliary test equipment |  |  |  |  |  |
| PC                       | PC Manufacturer: Dell                          |  |  |  |  |
|                          | Model: E5450 (SN : P48G001)                    |  |  |  |  |
| Remark: The informati    | on of the EUT is declared by the manufacturer. |  |  |  |  |

2.3 Applied Standards

According to the specifications of the manufacturer, it must comply with the requirements of the following standards:

Report No: RXA1711-0386EMC01R1

Test standards FCC Code CFR47 Part15B (2017) ANSI C63.4 (2014)

## 2.4 Test Mode

| Test Mode |                                     |
|-----------|-------------------------------------|
| Mode 1:   | Adapter + Idle                      |
| Mode 2:   | USB Copy (EUT with PC) + LTE + Idle |

During the test, the preliminary test was performed in all modes with all frequency bands (LTE), mode 2 (USB Copy (EUT with PC) + LTE + Idle) selected as the worst condition. The test data of the worst-case condition was recorded in this report.

C EMC Test Report No: RXA1711-0386EMC01R1

## 3 Test Case Results

#### 3.1 Radiated Emission

#### **Ambient condition**

| Temperature | Relative humidity | Pressure |
|-------------|-------------------|----------|
| 24°C~26°C   | 45%~50%           | 102.5kPa |

#### **Methods of Measurement**

The EUT is placed on a non-metallic table 0.8m above the horizontal metal reference ground plane. The distance between EUT and receive antenna should be 3 meters. During the test, the EUT was operating in its typical mode. The test method is according to ANSI C63.4-2014. Sweep the whole frequency band through the range from 30MHz to the 5th harmonic of the carrier. During the test, the height of receive antenna shall be moved from 1 to 4 meters, and the antenna shall be performed under horizontal and vertical polarization. The turn table shall be rotated from 0 to 360 degrees for detecting the maximum of radiated signal level.

The data of cable loss and antenna factor has been calibrated in full testing frequency range before the testing. During the test, the EUT is worked at maximum output power.

Set the spectrum analyzer in the following:

Below 1GHz:

RBW=100 kHz / VBW=300 kHz / Sweep=AUTO

Above 1GHz:

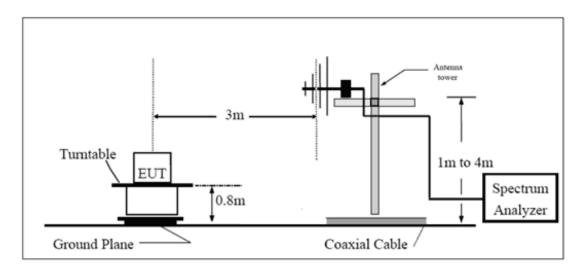

- (a) PEAK: RBW=1MHz / VBW=3MHz/ Sweep=AUTO
- (b) AVERAGE: RBW=1MHz / VBW=3MHz / Sweep=AUTO

The radiated emission was measured in the following position: EUT stand-up position (Z axis), lie-down position (X, Y axis). The worst emission was found in stand-up position (Z axis) and the worst case was recorded.

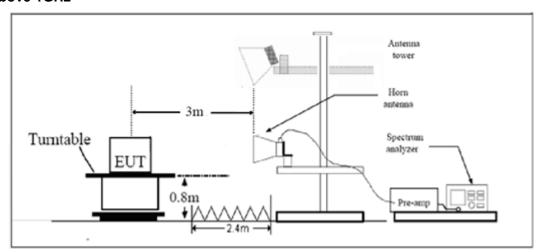

During the test, EUT is connected to a laptop via a USB cable in the case of Transfer Data mode. The EUT is used as the peripheral equipment of the PC. The data is transferred from EUT to PC; PC is connected to server via a long LAN cable.

### **Test Setup**

## **Below 1GHz**

### **Above 1GHz**

Note: Area side:2.4mX3.6m

Antenna Tower meets ANSI C63.4 requirements for measurements above 1 GHz by keeping the antenna aimed at the EUT during the antenna's ascent/ descent along the antenna mast.

Test Report No: RXA1711-0386EMC01R1

#### Limits

| Frequency<br>(MHz)                           | Field Strength<br>(dBµV/m) | Detector   |
|--|----------------------------|------------|
| 30 -88                                       | 40.0                       | Quasi-peak |
| 88-216                                       | 43.5                       | Quasi-peak |
| 216 – 960                                    | 46.0                       | Quasi-peak |
| 960-1000                                     | 54.0                       | Quasi-peak |
| 1000-5 <sup>th</sup> harmonic of the highest | 54                         | Average    |
| frequency or 40GHz, which is lower           | 74                         | Peak       |

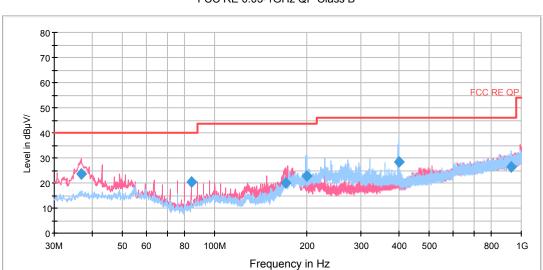

## **Measurement Uncertainty**

The assessed measurement uncertainty to ensure 95% confidence level for the normal distribution is with the coverage factor k = 1.96. U= 3.704 dB.

C EMC Test Report No: RXA1711-0386EMC01R1

#### **Test Results**

The following graphs display the maximum values of horizontal and vertical by software. For above 1GHz, Blue trace uses the peak detection, Green trace uses the average detection.

FCC RE 0.03-1GHz QP Class B

## 3.2 Conducted Emission

#### Ambient condition

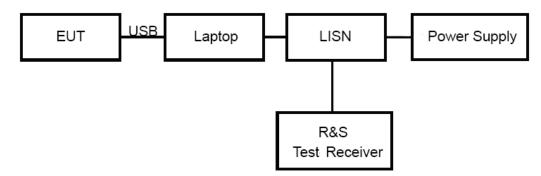

| Temperature | Relative humidity | Pressure |
|-------------|-------------------|----------|
| 24°C ~26°C  | 50%~55%           | 102.5kPa |

#### **Methods of Measurement**

The EUT is placed on a non-metallic table of 80cm height above the horizontal metal reference ground plane. During the test, the EUT was operating in its typical mode. The test method is according to ANSI C63.4-2014. Connect the AC power line of the EUT to the L.I.S.N. Use EMI receiver to detect the average and Quasi-peak value. RBW is set to 9 kHz, VBW is set to 30kHz. The measurement result should include both L line and N line.

During the test, EUT is connected to a laptop via a USB cable in the case of Transfer Data mode. The EUT is used as the peripheral equipment of the PC. The data is transferred from EUT to PC; PC is connected to server via a long LAN cable.

#### **Test Setup**

Note: Power Supply is AC Power source and it is used to change the voltage 120V/60Hz.

#### Limits

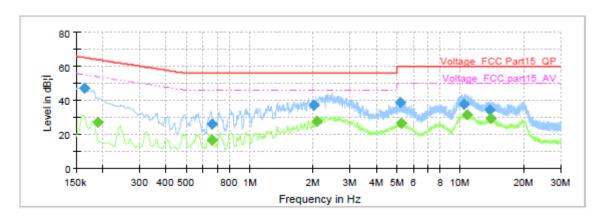

| Frequency  | Conducted L | -imits(dΒμV)          |  |  |  |  |
|--|-------------|-----------------------|--|--|--|--|
| (MHz)  | Quasi-peak  | Average               |  |  |  |  |
| 0.15 - 0.5                                       | 66 to 56 *  | 56 to 46 <sup>*</sup> |  |  |  |  |
| 0.5 - 5  | 56          | 46                    |  |  |  |  |
| 5 - 30 60 50                                     |             |                       |  |  |  |  |
| * Decreases with the logarithm of the frequency. |             |                       |  |  |  |  |

#### **Measurement Uncertainty**

The assessed measurement uncertainty to ensure 95% confidence level for the normal distribution is with the coverage factor k = 1.96. U= 2.57 dB.

#### **Test Results**

Following plots, Blue trace uses the peak detection; Green trace uses the average detection.
